

Appendix 4c Previous Beach Rd Beach Nourishment activity

The photos above and below were taken around 1995 after a previous beach nourishment in the same area as that currently consented.

Previous to this, Thames Coromandel District Council had been depositing in the coastal wetland, an Area of Significant Conservation Value but were directed not to once DoC was alerted.

Unconfirmed anecdotal reports recall that it had been stated that **2,000 cu³** had been deposited along the beach front, which does not correlate with pictures of the reported **1500 cu³** of the 2011 deposits.
